

Oliver Jan Jarosik

COMPUTER VISION ENGINEER · AI ENGINEER

Eisenacher Straße 123, 10777 Berlin, Deutschland

+49 1512 1432157 | O.jarosik@gmx.net | deweezy12 | oliver-jan-jarosik

Experience

Media Impact GmbH & Co. KG

Nov. 2024 - heute

AI ENGINEER

- Evolved an initial chatbot into an internal AI platform ("Media Impact Assistant") to automate research and comparison workflows.
- Implemented Retrieval-Augmented Generation (RAG) with vector databases and API integrations using Python and the OpenAI Agent SDK.
- Operated as an internal tool (50 requests/week) with strong focus on data privacy, contributing to team development workflows (GitHub, debugging, testing).

CinemaxX Entertainment GmbH

Okt. 2016 - Sept. 2024

TEAM LEAD

- Led a team in daily cinema operations, overseeing cash handling and reconciliation processes in a high-traffic environment.
- Responsible for staff scheduling, onboarding, and maintaining high service quality standards.

Education

Technische Universitaet Berlin

Okt. 2023 - Okt. 2026 (vsl.)

M.SC. INFORMATIK

- Master thesis (in progress): Learning-Based Optimization for 3D Surgical Visualization in Minimally Invasive Heart Valve Procedures

Bergische Universitaet Wuppertal

Abschluss 2023

B.SC. INFORMATIK

- Bachelor thesis: Automatic Texture Extraction on Synthetic Images using 6D Pose Estimation

Projects

Research Project (CAREER)

März 2025 - Apr. 2026

SYNTHETIC-TO-STEREO VISION PIPELINE FOR DOCKING INTERFACE POSE ESTIMATION

- Developed a real-time 6DoF pose estimation pipeline for docking interfaces using synchronized stereo camera data.
- Built a synthetic-to-real training pipeline leveraging 3D Gaussian Splatting, VMamba-based keypoint detection, and robust PnP/RANSAC pose estimation.

Software Development Project

2025 - heute

MEDIA IMPACT ASSISTANT

- Technologies: Python, OpenAI Agents SDK, Snowflake, Azure Cognitive Search, AWS EC2, Docker, GitHub
- Developed a modular Microsoft Teams chatbot with function calling to integrate internal data sources, including a Snowflake query pipeline, RAG with Azure vector search, and automated Excel reporting.

Computer Vision Project

2024

MASKING BUNDLE-ADJUSTING NEURAL RADIANCE FIELDS

- Contributed to NeRF experiments on synthetic data, incorporating methods for camera parameter optimization, occlusion handling, and lighting variation.

Skills

Languages	Python (advanced), C++, SQL
AI and Machine Learning	PyTorch, OpenCV, RAG, CNNs, GANs, Object Detection, 6DoF Pose Estimation, 3D Reconstruction
Backend and Systems	FastAPI, REST APIs, Docker
Cloud and Data	AWS, Microsoft Azure, Snowflake
Mathematical Foundations	Linear Algebra, Probability and Statistics, Optimization
Tools	Git, GitHub, Jira, Visual Studio Code, Anaconda, CLI Coding tools, Blender
Additional	Data Privacy Awareness, Ethical AI (Bias in Machine Learning)
